EDUCATION

York University, Lassonde School of Engineering — Toronto, ON
Bachelor of Science (Honours) in Computer Science — Expected Graduation: May 2028

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Organization, Linear Algebra
Fellowship: YSpace Inventor to Founder Fellowship (2026) · **Certifications:** React Native; Fundamentals of React.js (O'Reilly)

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, HTML/CSS, Pine Script
Frontend: React, React Native, Next.js · **Backend & Data:** Node.js, Firebase, stored procedures
Testing: Playwright, end-to-end (E2E) testing, regression testing
Developer Tools: Git, Maven, Nx · **APIs & Platforms:** OpenAI API, Stripe

EXPERIENCE

PointClickCare (Co-op) — Sep 2026 – Present
Software Engineer Intern — Mississauga, ON

- Migrated Nautilus, a React/TypeScript healthcare billing micro-frontend, from the legacy UI to the new design system and made it responsive across desktop and tablet, giving billing staff one consistent interface.
- Diagnosed an Edit Details defect where saved edits failed to persist: confirmed via browser network requests that updated values left the client correctly, then traced them through application logs and SQL stored procedures to input-field flags that caused the database to ignore the new values; fixed it and validated with Playwright E2E tests.
- Built a reusable unsaved-changes guard adopted across 13 call sites with zero consumer changes, warning users before they navigate away from in-progress billing work.
- Fixed initialization and timing defects that could load the settings page blank or clear it while users were typing.
- Strengthened automated regression tests by temporarily reverting each fix to confirm its test failed, and removed 2 tests that still passed against broken behavior, so regressions fail CI before reaching users.

PROJECTS

Exee AI · exetasy.com — Apr 2026 – Present
Founder & Lead Developer · YSpace, York University — Toronto, ON

- Built a full-stack AI exam-prep platform (Next.js, TypeScript, Firebase, OpenAI API) where students practice AI-generated exams and lab tests and see how ready they are before test day.
- Designed a teacher dashboard where instructors describe what to assess, the AI generates the practice exam, and the class view surfaces readiness, difficulty calibration, and weak topic areas.
- Integrated Stripe subscriptions and launched the product live; running an A/B study with students to measure the platform's effect on grades.

Macrovia · macrovia.health — 2025 – Present
Developer · iOS App — Toronto, ON

- Built an iOS calorie and health tracker that analyzes a photo of a meal and returns estimated calories and macros using an AI vision pipeline.
- Integrated a smart wristband SDK to sync activity and health data, combining food intake and energy burned in one daily dashboard.
- Shipped as a live subscription product, using Firebase for authentication and storage and Stripe for payments.

Algorithmic Trading Bot · *Python, MetaTrader 5, Pine Script*

- Built a modular Python/MT5 trading bot for XAUUSD, GBPUSD, EURUSD, and USDJPY that detects fair value gaps, order blocks, and liquidity sweeps; audited and rewrote the companion Pine Script strategy (v2, v2.1).
